

TAURI Cloud is a plugin of Star Control and a powerful companion to all TAURI temperature check tablets where users can compare day to day temperature data, review abnormal cases, staff entry information, manage settings on multiple devices and review entire history of collected data.

Detection records in devices

Organize devices by names or groups and view collected data of each device with abnormal cases highlighted.

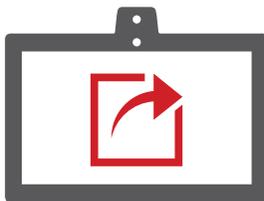

Visitor temperature results

View all visitor temperature check results (date, time, temperature result, mask detection).

Add staff profiles

Create sub accounts for all staff, group them according to departments and assign various types of access to them.

Export + auto send reports

Option to automatically export and send weekly or monthly reports to specified email address.

Staff temperature results

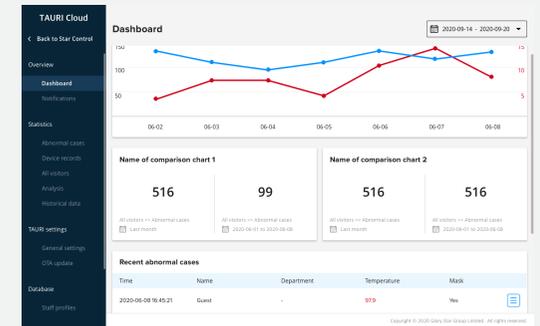

View all staff temperature check results (name, department, date, time, temperature result, mask detection).

Temperature analysis chart

Analyze and compare overall collected data or choose a specified time frame with simple visual charts.

Dashboard

Temperature results (all)

All visitors

Time	Name	Department	Temperature	Mask
